

Company Profile

Technology & Trust

Nireco Corporation's corporate philosophy is "Technology & Trust." Since our founding in 1950, we have supported the manufacturing and business activities of our customers by providing production line controls, measurement and inspection equipment for production and processing lines. In today's market environment, our products face significant international competition due to economic globalization. In this environment, we have built a strong position as a leading provider of control, measurement, and inspection equipment by rapidly adopting new technologies and utilizing our extensive portfolio of existing technologies to seek new business opportunities. By providing advanced "Technology" that meets the needs of our customers, we have gained their "Trust" and are able to grow with them as their partner of choice. Nireco is committed to using the value of these partnerships to create a better life and a better world, and to bring joy and excitement to everyone who uses our products. We deeply appreciate the many years of support we have received from our customers, business partners, shareholders and other stakeholders, which has enabled Nireco to become a leading company in its field. We look forward to continuing to work with you to enable you to improve your business and build a better society.

Our Major Strengths

Three keywords describe our products: "control," "measurement" and "inspection". Our products, which also include customized devices, match the unique characteristics of each customer's production line. This eliminates waste in the production process and contributes to improved quality. Along with our long track record of successful products, our other strength is our after-sales service that provides customers with worldwide support for their manufacturing.

Process Control Business

Our Process Control Business provides products mainly used for steel and nonferrous metals production processes. Process Control has been a core business for Nireco since the company's beginning. We started by providing process control equipment that use hydraulic power to control operating conditions such as temperature and pressure in the steelmaking process. Today, our equipment products play an important role in supporting quality and efficiency in a wide range of steel-product manufacturing processes. In addition to providing products, our after-sales services such as maintenance and replacement of parts and factory components play an important role in supporting steel-product production. The strengths of this business rest on our solid track record of reliability built up over many years of experience enabling customers to keep production lines running smoothly and our extensive system of support services.

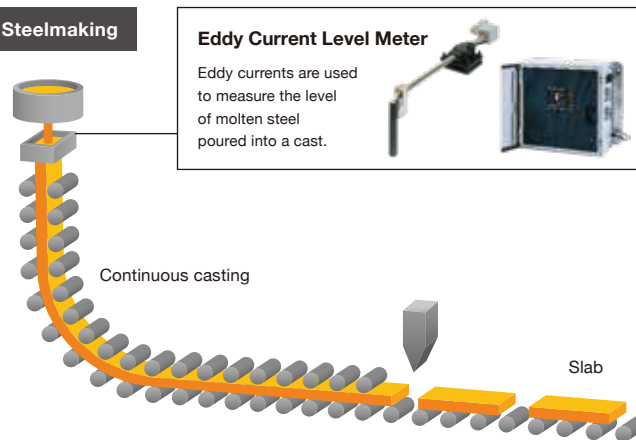

■ Nireco products used in the steel-manufacturing process

Raw Materials / Pig Iron

Steelmaking

Surface Treatment

Edge Position Control System

Controls the meandering of the steel strip traveling along the production line.

Automatic Marking System

Imprints various information on the finished metal product.

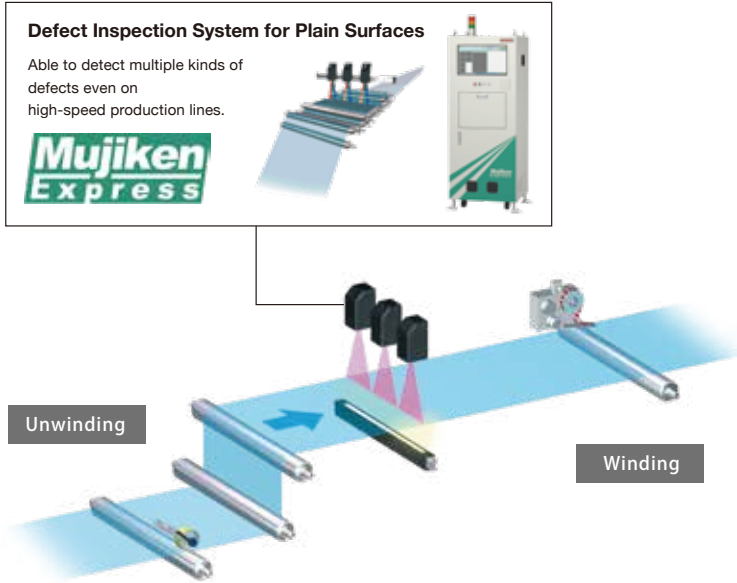

Inspection Systems Business

This business segment utilizes our core technologies of sensing and optics to provide vision systems that inspect at high speeds and high resolution to detect tiny scratches, blots and other irregularities almost invisible to the human eye. The technologies in this segment were originally developed for the steel industry to measure crystal grains of steel by mathematical analysis of captured images of steel surfaces. Another application is accurate measurement and management of printed dot matrices. We eventually accumulated a rich stock of image processing technology through years of providing assistance to universities and research institutes engaged in basic research and testing of samples in such fields as medical science, biology and industrial applications. Today, Nireco offers inspection systems for a number of products ranging from highly functional films used in various industries to food and agricultural products. In addition, we continuously update our inspection systems in response to new demands from customers.

Inspection systems for the surface of plain materials

Defect Inspection System for Plain Surfaces
 Able to detect multiple kinds of defects even on high-speed production lines.

Mujiken Express

Inspection System for Food and Agricultural Products

Sorting system AP8770 series

Near-infrared (NIR) Analyzer

Desktop NIR Analyzer A8850

Optics Business

Our Optics Business provides laser equipment and optical components for applications in a variety of advanced technology fields. Due to their special characteristics, lasers are widely utilized in industrial and medical fields for marking products and as light sources for various types of inspection technologies. We provide laser equipment utilizing our storehouse of solid-state laser and fiber laser technologies for application in a wide range of devices such as semiconductor inspection devices, industrial processing devices and medical diagnostic devices. Our ability to manufacture high-quality optical components comes from a combination of high-level optical design technologies, high-precision processing technology and measurement/evaluation technology, skillful engineers and state-of-the-art production facilities that exists within Nireco Group companies. We provide a wide selection of optical components, such as wave plates and polarizers, customized to the needs of our customers in industrial and academic fields.

Laser light sources for semiconductor inspection devices

Deep UV fiber laser Cygnus

Nonlinear crystals used in semiconductor inspection devices

CLBO crystals

Laser light sources for marking and microfabrication

Green Laser HR-G10

Processed sample

Optical components

Polarizers

Company Profile

Company name	NIRECO CORPORATION	
Established	November 1950	
Capital	JPY 3,084 million	
Stock	Tokyo Stock Exchange Standard Market	
Head office	2951-4 Ishikawa-machi, Hachioji-shi, Tokyo 192-8522, Japan TEL: +81-42-642-3111 FAX: +81-42-644-5815 URL: https://www.nireco.com	
No. of employees	450(Consolidated basis: As of March 31,2024)	
Net Sales	JPY 9,861 million (Fiscal Year 2024)	
Business overview	Development, production and sales of control and measurement systems along with system maintenance services.	
Business segment	Control Equipment	Process Control Systems, Automatic Marking Systems, [Iron, steel, and non-ferrous metals] Edge Position Control Systems (Metal industry related), Eddy Current Level Meter, etc.
	[Web Control]	Edge Position Control Systems (Printing, Film-related), Tension Control Systems, Automatic Resister Control Systems, Gluing Control Systems, Printing Quality Control Systems, etc.
	Inspection Systems	Defect Inspection System for Plain Surfaces, Image Processing and Analysis Systems, Near-infrared Analyzer, Agricultural Product Quality Inspection Systems, etc.
	Optics	Laser Equipment, Optical Components, etc.
Management	President and CEO	Shinichi Nakasugi
	Director and Executive Officer	Toshiharu Kubota
	Director and Executive Officer	Takuya Sasada
	Director, Audit & Supervisory Committee Member	Fujiro Shinohara
	Director, Audit & Supervisory Committee Member	Toshiyuki Takagi*
	Director, Audit & Supervisory Committee Member	Naoko Ohki*
	*Outside Director as provided for in Article 2-15 of Japan's Company Act.

Pioneer of Automatic Control Systems

Reviewing Nireco's history, our company started in 1931 as the Askania Joint Stock Company established by Askania Werke A.G. of Germany. In 1936, Askania manufactured hydraulic-jet-pipe automatic control devices and was at the time reliant on imports. In the same year we reorganized to become a joint-stock company. Askania dissolved as a corporation, but the former employees of the company played a central role in the establishment of Nihon Regulator Company, which came into existence in 1950 with the capital participation of several business partners. In order to meet the diverse needs of customers in the continuously evolving steel and chemical industries, we integrated the technologies we developed in-house with technologies sourced from overseas to produce new types of process automation equipment. This approach has been central to our business since our founding and through our partnerships with domestic and overseas customers has contributed to the growth and advancement of many different industries. Starting with the manufacture of process automation devices for makers of steel and nonferrous metal products, Nireco gradually expanded into new fields by applying the technologies we developed to new and existing markets. Our product and service expertise in our three main business areas, Control Equipment, Inspection Systems and Optics, makes us a technology leader and an important partner for companies both in Japan and globally.

History

1931	German enterprise Askania Werke AG establishes the Askania Corporation in Japan		1996	Construction of research center at the Hachioji site completed	
1936	Askania reorganized as a joint-stock corporation		1998	Acquired Nireco Taiwan Corporation by underwriting a capital injection	
1945	Askania in Japan is dissolved	Automatic control device made by Askania at the time		ISO9001 certification acquired for all web controllers	
1950	Nihon Regulator Co., Ltd. established with the head office located in Chuo-ku, Tokyo		2000	50th anniversary of the Company's founding	
1951	Nihon Regulator's "Meguro" plant begins production in Shinagawa-ku, Tokyo		2003	Nireco Automatic Controller (Shanghai) Co., Ltd. established in Shanghai, China	
1956	The "Rokugo" plant begins production in Ota-ku, Tokyo		2004	Terminated OTC company listing and listed on the JASDAQ Securities Exchange	
1965	The Hachioji site opens in Hachioji-shi, Tokyo		2012	Closed our Kyobashi Office and merged it with Hachioji site	
1969	Head office relocated to Minato-ku, Tokyo		2013	Merged with and absorbed subsidiary Nireco Keiso Co., Ltd.	
1971	Meguro Plant operations transferred to the Hachioji site		2014	Nireco Process Korea Co., Ltd. established in Korea.	
1972	Subsidiary Nireco Service Co., Ltd (later Nireco Keiso Co., Ltd.) established		2015	Upgraded the aging Hachioji site by constructing a new building and seismic retrofitting, and added newly constructed ancillary facilities	
1979	Head office relocated to Ishikawa-machi, Hachioji-shi, Tokyo		2017	Acquired the Japanese company Megaopt Co., Ltd. and converts to a subsidiary	
1984	Company name changed to Nireco Corporation Rokugo plant operations transferred to the Hachioji site		2018	Nireco Process Korea Co., Ltd. expands by acquiring land and buildings, establishes localized production system	
1989	Nireco is listed on the OTC share market with the Japan Securities Dealers Association (currently JASDAQ)		2019	Nireco International GmbH established in Germany Merged with and absorbed subsidiary Megaopt Co., Ltd. Acquired the Japanese company Kogakugiken Corp.	
			2021	Acquired the Japanese company SEIBU Electric Corp.	
			2023	Nireco Process Korea Co.,Ltd. changed company name to Nireco Korea Corporation	
			2024	Merged with and absorbed subsidiary MIYOTA Co., Ltd. Acquired the Japanese company KEIHIN KOMAKU Co., Ltd.
